

Sprint 3:Report SOS(Save Our Species)  
MarineVP  
11/18/19

**Actions to stop doing:**

- Don't miss meetings, don't make plans/appointments that overlap with scheduled meeting times
- Procrastinating tasks towards later in the sprint
- Don't be overambitious with how many tasks we can complete in a short amount of time

**Actions to start doing:**

- Have more group-wide pair programming sessions/code reviews
- Call tasks as early as possible
- Ask for help if you need it
- We saved too much design for the last minute. Start design early this sprint

**Actions to keep doing:**

- Good communication
- Be available on Slack/keep communication on Slack instead of private channels
- Keep showing up on time

**Work completed/not completed**

- GPS sends coordinates to a new view and opens external maps giving directions to the location
- User can choose a photo from camera roll and it appears in the app, still need to implement it so the photo is sent to Firebase
- Login is mostly completed, still needs to be linked to the reports
- We still need to implement the client being able to view a list of reports in chronological order
- We still need to create a more detailed view of the report with photo, timestamp, location, and description.
- As a marine organization, I want to view the report in detail after selecting it from the list of reports.
- We finished implementing backward navigation to the app.
- We finished changing the single-line text field to a multi-lined text field.
- 4 PRs merged, 2 still open
