

Sprint 2 Report: SOS (Save Our Species)
MarineVP
11/04/19

Actions to Stop Doing:

- Stop being overly optimistic about team member's time availability and instead consider how upcoming time sinks (exams, projects, work) will have an effect on their ability to contribute and plan accordingly. In other words, note when people will have more time and plan to be really productive in that time. Also, understand when people will be really strapped for time and be reasonable about expectations during that period.

Actions to Start doing:

- Communicate on slack when you are working on the project on campus to give other group members the opportunity to join you (Ideally in the DSC Lab).
- Let other team members know if you've finished a task or finished something new out (make yourself available to educate someone else on something you learned).

Actions to Keep Doing:

- Keep finding times where several of our group members can meet in the DSC to work on programming together.
- Keep being communicative about progress and obstacles.

Work Completed/Not Completed:

- 7 Pull Requests were opened, 6 were merged
- 9 Tasks were completed, 2 were still in progress, 1 not started
- 3 User stories were completed, 1 in progress

Work Completion Rate:

Burn-up
